AUTOMATIC NEST

Tarimar Automatic Nests are designed to increase egg quality and the production to the highest level.

ADVANTAGES

- ▶ Easy and Quick Installation
- ▶ Low Investment Cost
- ▶ Clean & Hygienic Egg
- ▶ Easy Maintenance
- ▶ Animal Friendly Raw Material

New Generation Central Belt System

Double Side, One Floor, Four Sections

Dimensions	145 x 233 cm
Capacity for Breeder	190 – 210 females
Capacity for Layer	250 – 270 layers
Egg Belt Size & Speed	490 mm & 6 meter / hour

MOVING BACK WALL

The special design of the moving back wall allows the flock to leave the nests in a quick & clean way. At nights, it closes the nests completely, so the flock can not lie inside the nests.

NEST PAD

The alternatives of Rubber Pads or Astrotuf are available. It can be cleaned easily. Most important characteristic of the pads is the contact of the eggs with pad is in minimum.

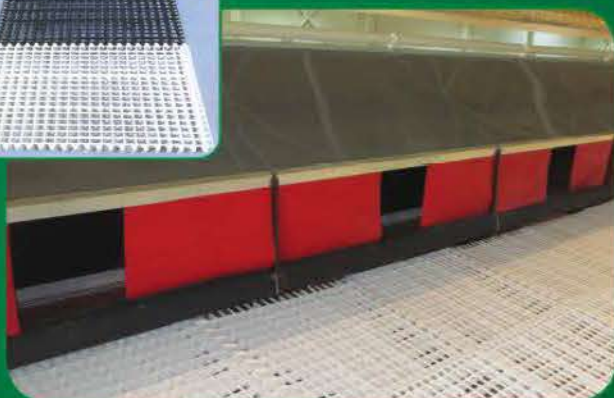

EGG COLLECTION TABLE

It is wide and practical in operation. An emergency stop bottom is installed. It is designed according to the egg collectors' comfort and speed.

EGG BELT

Operated in double belt system. It is produced from pp material in hexagon holes. With the springy transport system, the eggs are collected to the front of the house safe and without any vibration. The belt speed can be adjusted with a speed controller.

PLASTIC SLAT

The dimensions of the slats can be 100x60 cm or 120x60 cm. Loading resistance is 200kg/piece, produced from high quality UV stabilized polypropylene copolymer. Color options, White, Black and Grey. Various slat alternatives for Layers & Broiler Breeders. Any feeding system can be installed on it.

WALK-OVER NEST

It allows the chicken cross over from one side to the other side. This helps to the homogeneity of male / female population in the poultry house.

ADJUSTABLE NEST LEGS & SUPPORTS

All the models of TARIMAR Nests are installed with an adjustable stainless steel leg system. This will neutralize the mistakes and slopes on the floor.

ANTI-PERCH ROLL

This part is on the top of main nest unit. It prevents the chicken from perching on the nests and disturbs the females in nest units. Thus, it increases the egg production quantities, edgeways etc...

BELT CLEANING UNIT

The System has got a cleaning unit at the end of line. Special brush under the belt keeps the egg belt clean. Thus, it decreases the dirty and crack egg quantity.
